

**BBVA** realizing  
Opportunity

# Migrating to a container-based Cloud BPMS platform at BBVA

Antonio Valle  
Global Head BPM Architecture BBVA

Marcos Regidor  
Principal Solution Architect, Red Hat

Kris Verlaenen  
Senior Principal Software Engineer

May 10th, 2018

## Presenters Intro

### **Antonio Valle, BBVA** **Global Head BPM Architecture**

In his current role he manages and lead the team that develop and maintain the BPM Platforms that serve the different countries where BBVA operates.

### **Marcos Regidor, Red Hat** **Principal Solution Architect**

In his current role he helps BBVA to achieve their Digital Transformation journey leveraging Red Hat Open Source culture, PaaS, IaaS and Middleware Solutions in the different countries where BBVA operates.

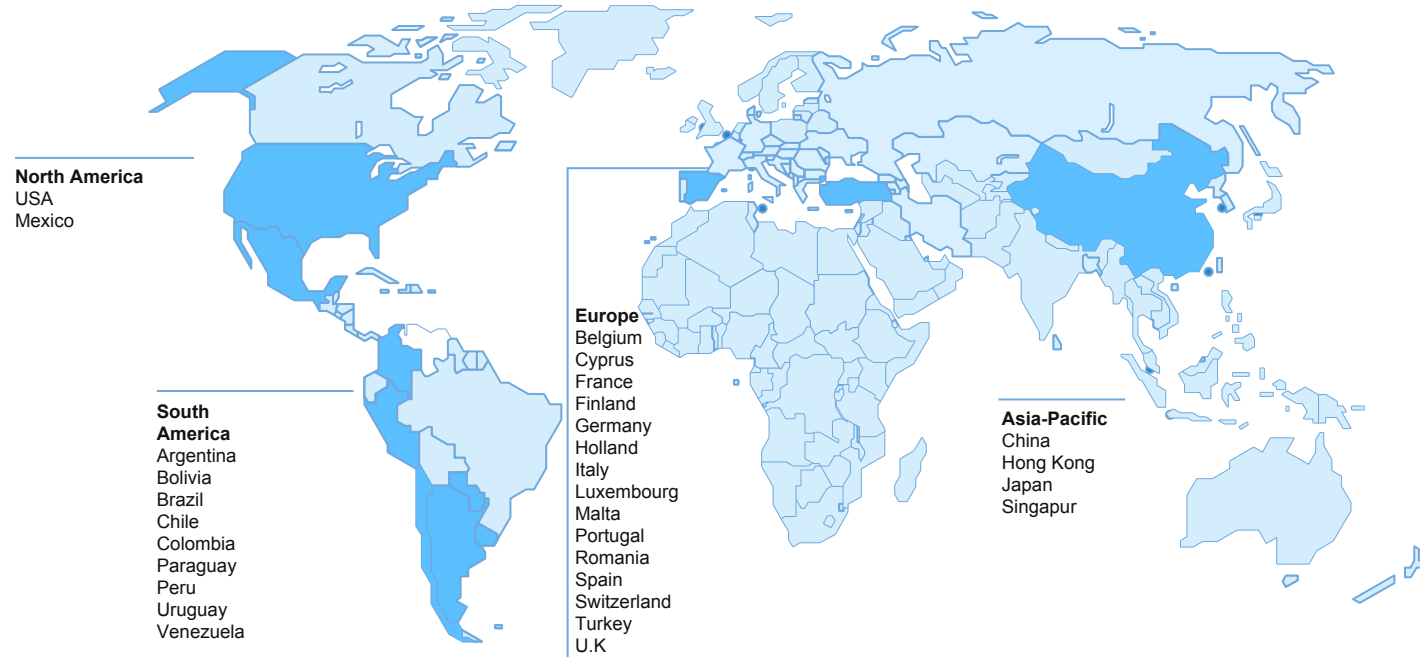

### **Kris Verlaenen, Red Hat** **Senior Principal Software Eng.**

Red Hat Business Automation product architect and jBPM community lead, is interested in everything related to business process management.

## Schedule

- 01** BBVA Intro
- 02** Why change? BBVA Transformation
- 03** What was needed? BBVA Requirements
- 04** How we get there? Collaboration Set up
- 05** The journey till now: Collaboration model and results
- 06** How RHPAM v7 Cloud Ready looks like now and roadmap
- 07** Lessons learnt and future goals
- 08** Q & A

# BBVA Intro

**€ 690**

Billions of total assets

**72**

Millions of customers

**>30**

Countries

**8.271**

Branches

**31.688**

ATM's

**131.856**

Employees

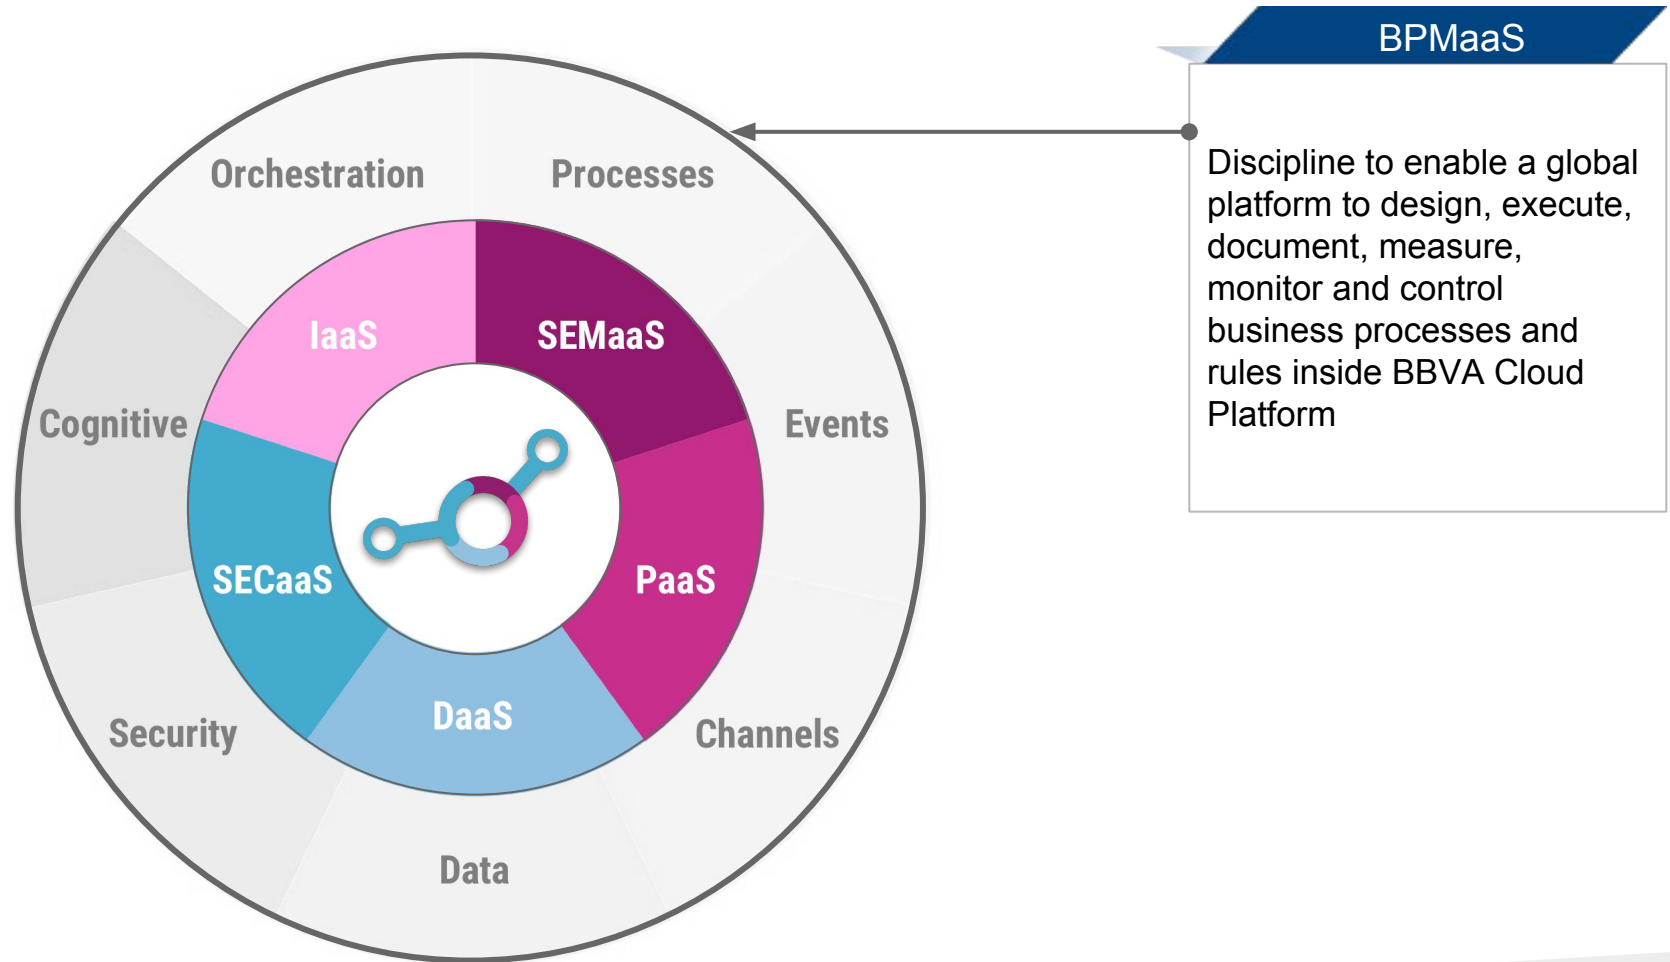

# BBVA Transformation

## The pillars of transformation in BBVA

**Transform BBVA  
Technology** = **( New  
Tech Stack  
in new  
platform + Transform  
developers + Rebuild  
banking  
apps )**

# BBVA Platform

# What was needed?

## The transformation...

Global **Multilocal** complex and heterogeneous products and platforms: lack of seamless experience

---

Manual processes loosely controlled with **ad-hoc measures**, reactive and slow with **poor agility** to launch new products or improvements rapidly

---

Know-how externalization, siloed local teams, no 'Global Community' approach

---

High **maintenance and operating cost**, non scalable, manual operation

# What was needed? BBVA Requirements

Our objective is to build a platform to enable truly digital processes automation...

## Global Cloud Platform

1

As **global** as possible, **auto-provisioning**, **auto-scalable**, with a high degree of reuse and **same developer experience**

## Automated

3

**Fully automated processes** and **self-served standard** and **interoperable** (end-to-end operational alerts/metrics, logs and traces)

## Lifecycle and API

5

**Processes life cycle depending on the related app** (devops embedded).  
Improve reuse with a Global API Catalog

## Real time

2

Enable highly **distributed monitoring for processes and tasks** (event based) **reducing time, costs and errors**

## Open Source

4

Leveraging **open-source** technologies based on subscription model to **avoid vendor lock-ins**. Low cost computing

## Talent

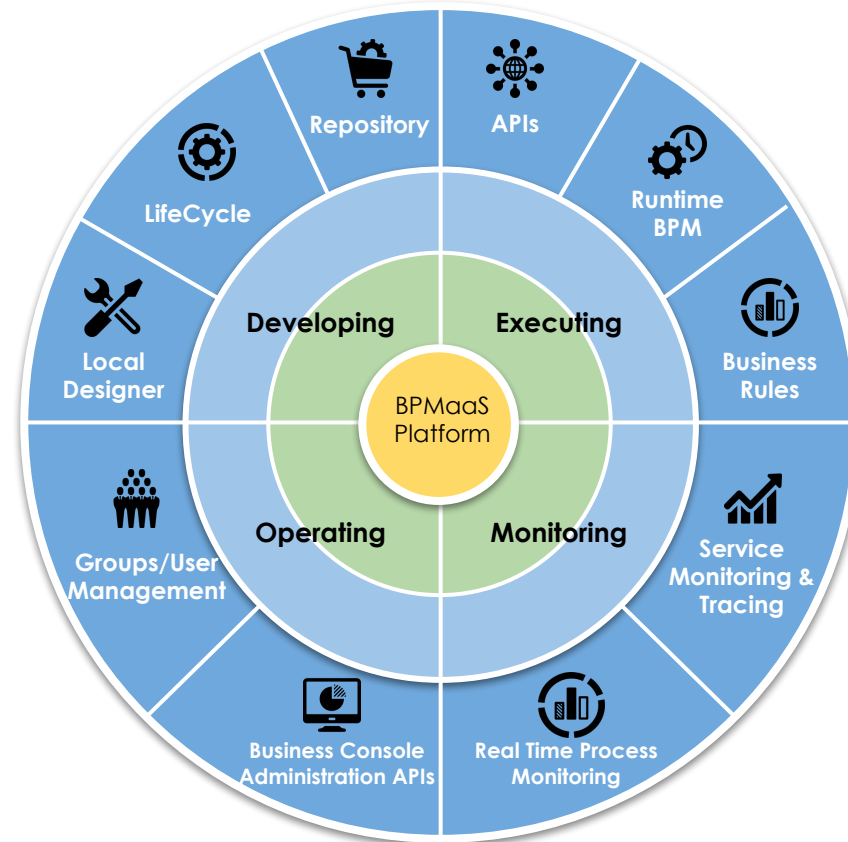

6

Hyperskilled in-house **Talent**, **Global communities**, **agile teams** collaborations.  
Ninja Academy, Tech University

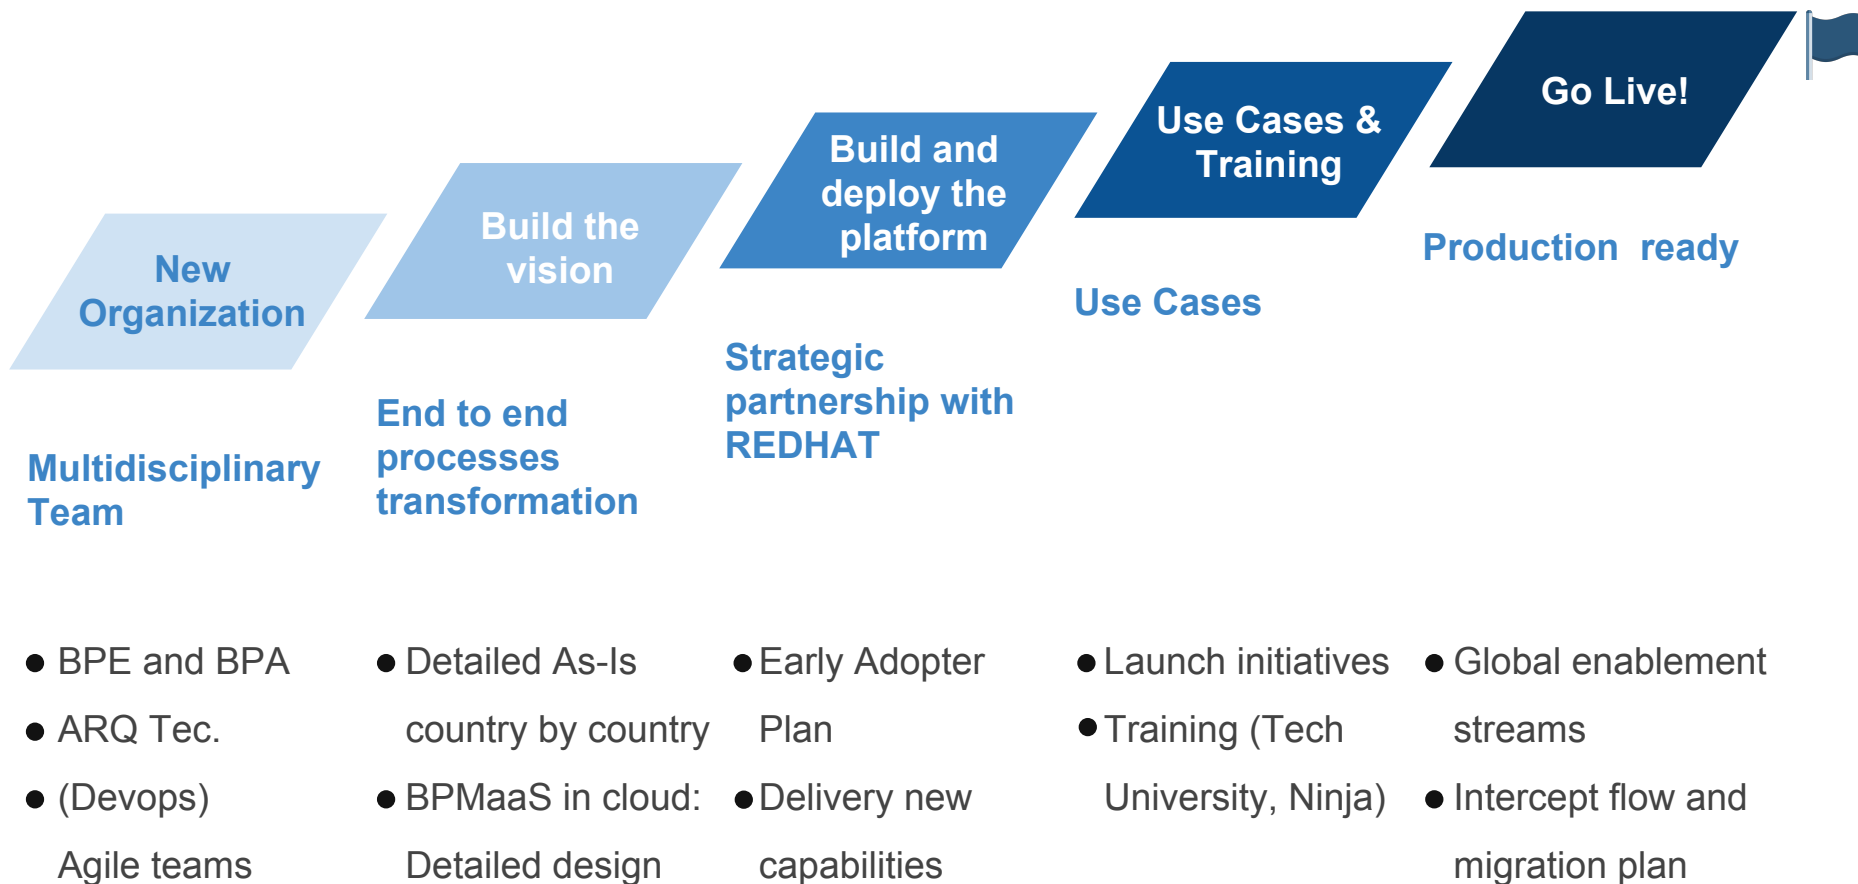

# Advanced Process Automation Capabilities

## Platform Overview

# BPM Platform - Product RoadMap

# How we get there? Collaboration Set up

**Product Manager visited BBVA on January 2017 with this outcomes:**

## Initial Functional Gaps Assessment

1

First set of functional requirements identified and defined as “Gaps” were explained and understood by Product Management

## Initial Architecture Gaps Assessment

2

The requirement to deploy RH BPM on top the Openshift were initially assessed

## FDE Role

3

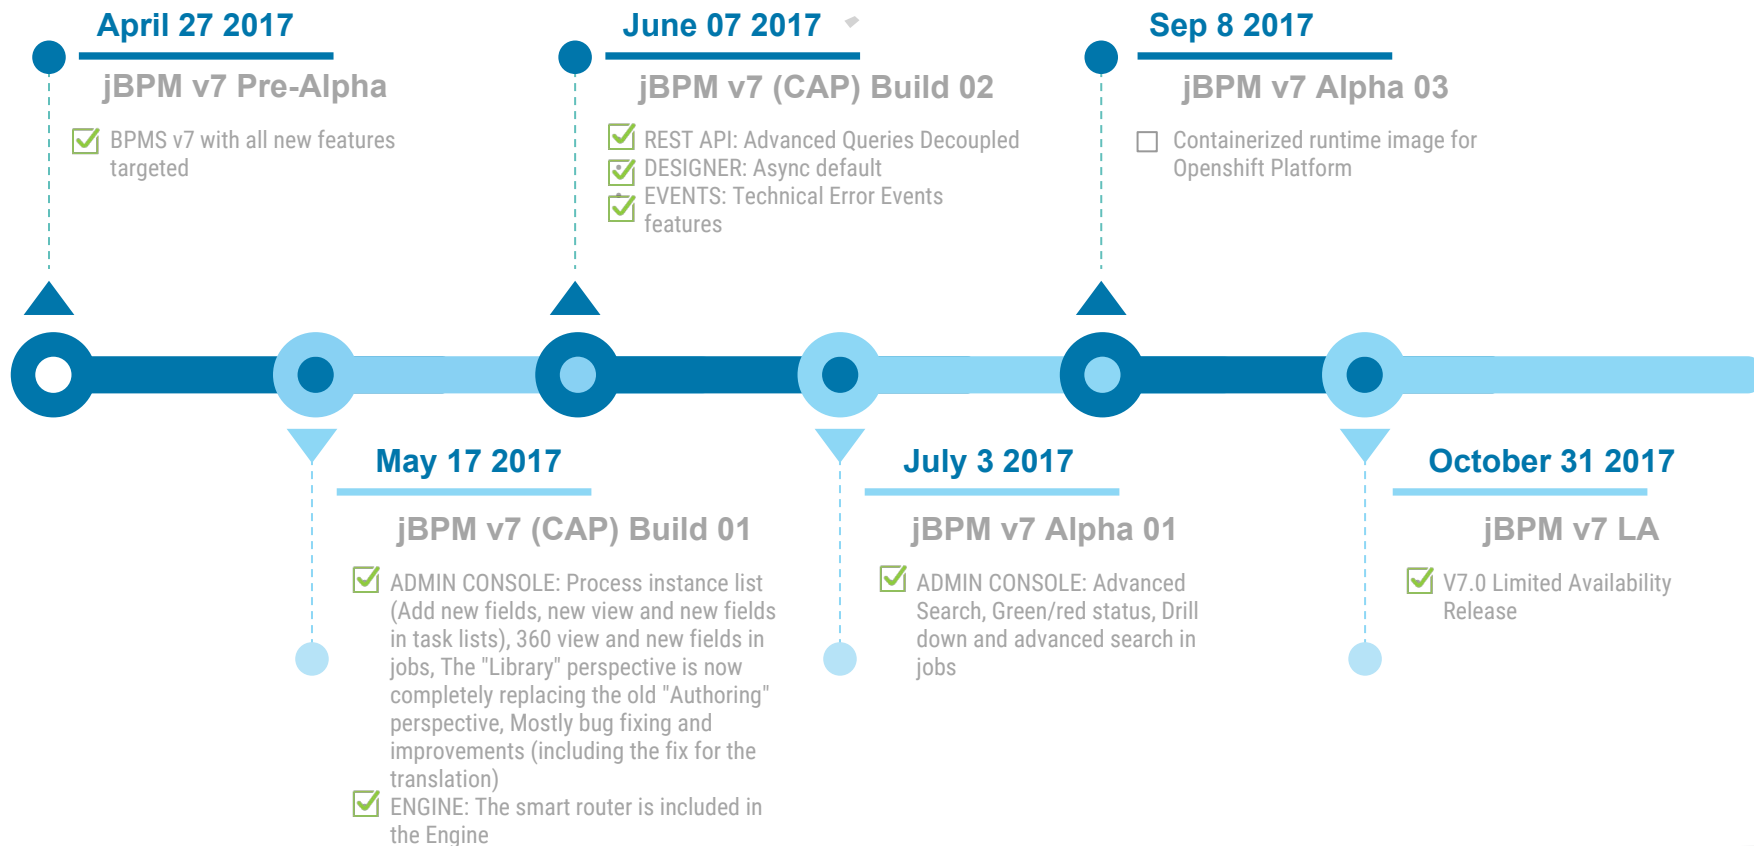

Proposed to add a new role in the Project: Forward Deployed Engineer to act as the voice of BBVA in the Engineering team and enhance collaboration

## LA Version and Releases plan

4

PM Delivered a releases plan with a Limited Availability Version special release to be used to start to develop processes.

# Initial releases plan

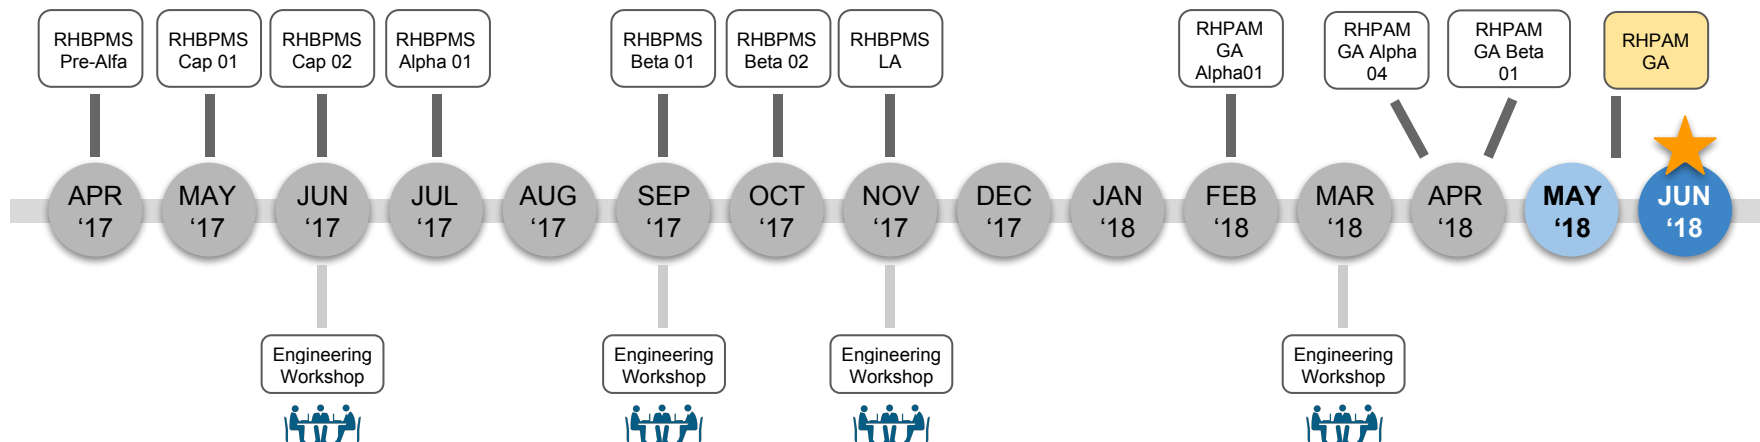

# Process automation platform - RoadMap

## RHPAM v7

2017

2018

**BBVA BPMaaS: Release 1 July '18**

- Delivering the Platform
- Support to Pilots

# The Journey till now: Workshops Performed

June 2017 - Brussels, Belgium

September 2017 - Madrid, Spain

November 2017 - Madrid, Spain

November 2017 - Mexico City, Mexico

March 2018 - Madrid, Spain

# Working together to build RHPAM v7

## How we have done so far?

Pull Request Sent

**+79**

Pull request sent by BBVA

Pull Request Accepted

**+71**

Accepted and incorporated into the product

“**FDE**” Red Hat role working on-site at BBVA with process automation team

New “**ADE**” role in BBVA working with FDE and Red Hat engineering team

**Focus** on the resolution of critical gaps identified in line with Red Hat engineering team

**Prioritization** of new features and bugs with Red Hat engineering team

**Workshops** with Red Hat engineering team & product management ensuring product alignment

**BBVA** is involved with UX team to ensure product vision

## Enhancement highlights

- Better support of BPMN2.
- Management console improvements.
- Error management. Detailed information about errors.
- Additional info to the events API. Now a complete information abouts events is available at Process & Task listeners.
- New mappers and query builders for custom queries.
- Application templates for Openshift deployments.

# Working together to build RHPAM v7

## How we have done so far?

### What's next?

- Better coverage of BPMN2 standard.
- Improvement in collaborative work at design time.
- Enhance the capabilities of BPM designer. Provide a new wizard for gateway expressions.
- Extensions to the REST API for a complete environment automation.
- Projects templates: a customized default project to meet basic corporate.

# Gaps “Bite”: Design and Development Tools

		GAP	Open	Assigned to	BBVA Requir	Analysis	Design	BBVA Valid	Impl	Status	Jira	Included version (Draft)
Designer	BPMN	jBPM does not support Reusable Event Definitions	3 Oct	Red Hat	100%	--	--	--	--	Done	BAPL-802	Alpha 03
		BPMN swimlanes (Autoclaim)	16 Oct	Red Hat	100%	--	--	--	--	Done	BAPL-808	Alpha 03
		BPMN swimlanes import	11 Oct	Red Hat	100%	--	--	--	--	It will be resolved in the new designer. Meanwhile, using RHAMT/Saxon with old Designer	BAPL-803	Pending
	Enhance UX	Improvements in the graphical constraint editor	08/03	Red Hat	100%	100%	--	--	--	Waiting for Red Hat solution	BAPL-912	7.1 GA
		MI: Mapping automatically from MI data to I/O assignments (Human tasks)	08/03	Red Hat	100%	--	--	--	--	In progress	BAPL-895	7.0 GA
		Adding support for multi instance: parallel or sequentially	08/03	Red Hat	100%	100%	--	--	--	Waiting for Red Hat solution	BAPL-910	7.1 GA
		Enrich compilation error messages	15/03	Red Hat	100%	--	--	--	--	Waiting for Red Hat solution	--	Pending
	Cloud	Collaborative work	15/03	Red Hat	100%	100%	--	--	--	Waiting for Red Hat solution	--	Pending
	Projects BC	It is not possible to delete a project.	08/03	Red Hat	100%	--	--	--	--	Done	AF-984	Alpha 03
		Pom.xml when creating a project with quick setup is different than pom.xml with advanced configuration	15/03	Red Hat	100%	100%	--	--	--	Waiting for Red Hat solution	BAPL-914	7.1 GA
		Rules: Rules service task does not detect a ruleflow-group defined in xsix rule file.	15/03	Red Hat	100%	--	--	--	--	Waiting for Red Hat solution	BAPL-915	7.1 GA

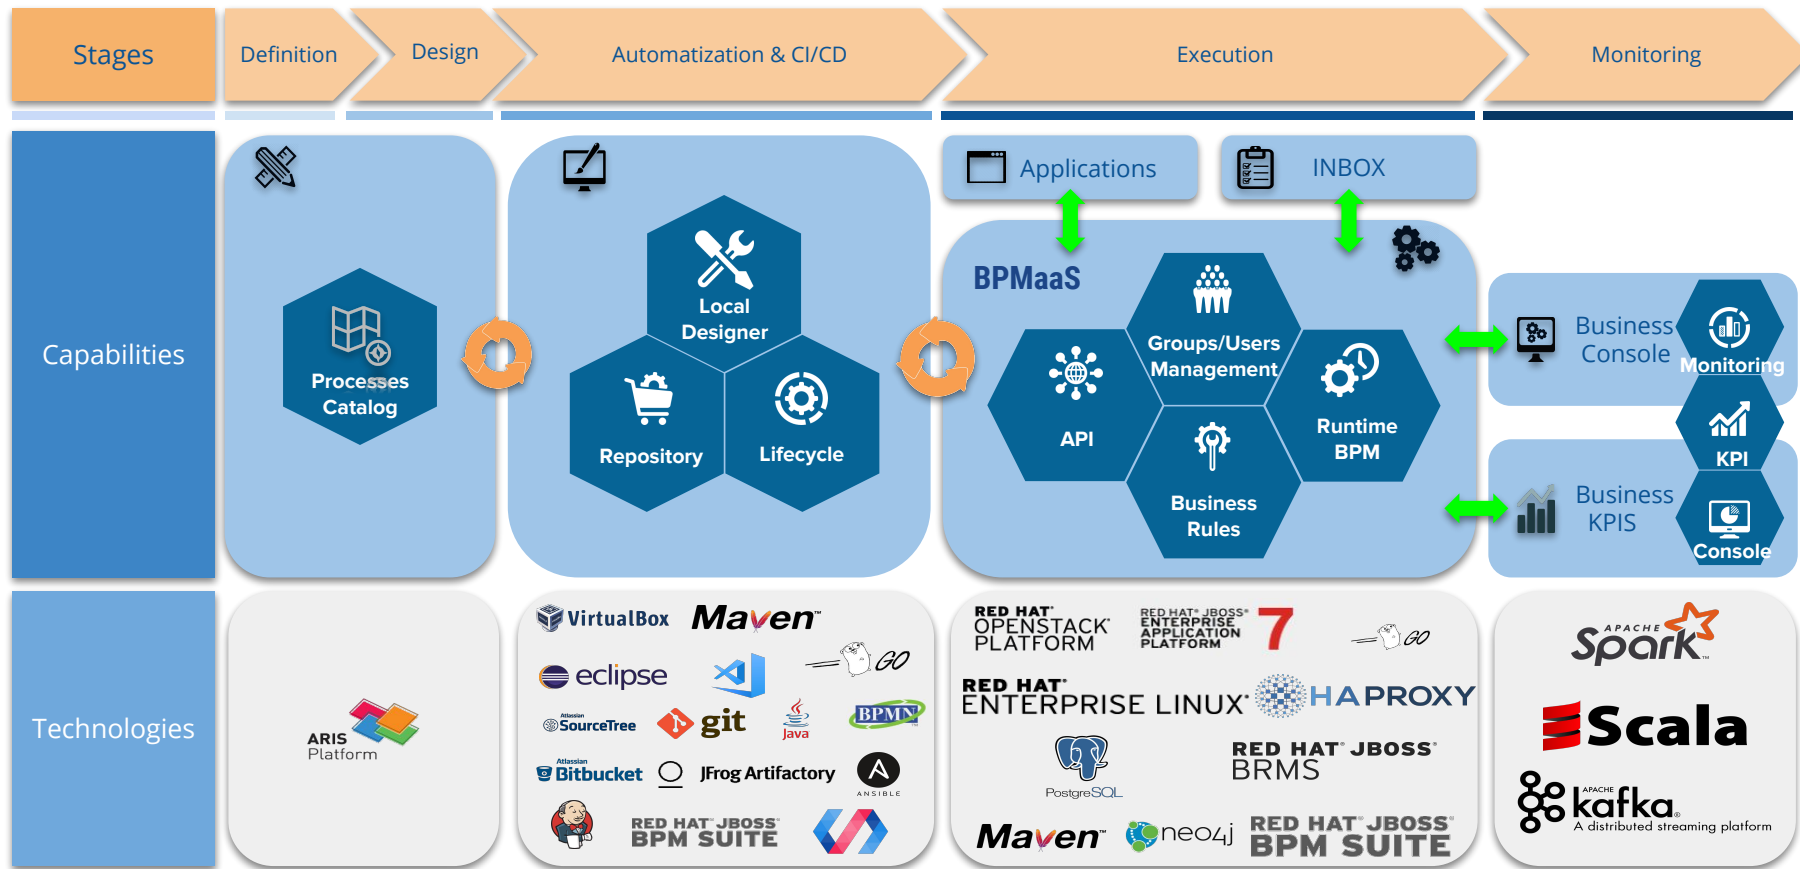

# Gaps “Bite”: Real time monitoring

		GAP	Open	Assigned to	BBVA Requir	Analysis	Design	BBVA Valid	Impl	Status	Jira	Included version (Draft)
Events	Enhance Events data	Not Available fields in TaskLifeCycleEventListener	11/11	Red Hat	100%	100%	--	--	--	Done.	BAPL-819	Alpha 03
		Required events that don't exist in the User Task event listener	10/11	Red Hat	100%	--	--	--	--	Done	BAPL-813	Alpha 03
		Status completed in nodes when the process is aborted	26/1	Red Hat	100%	100%	--	--	--	Done	BAPL-877	Alpha 03
		Information not available in NodeInstance event listener	26/1	Red Hat	100%	--	--	--	--	Done	BAPL-876	Alpha 03
		Information is not available in ProcessEventListener	10/11	Red Hat	100%	--	--	--	--	Done. Waiting for BPMS release.	BAPL-814	Beta 01

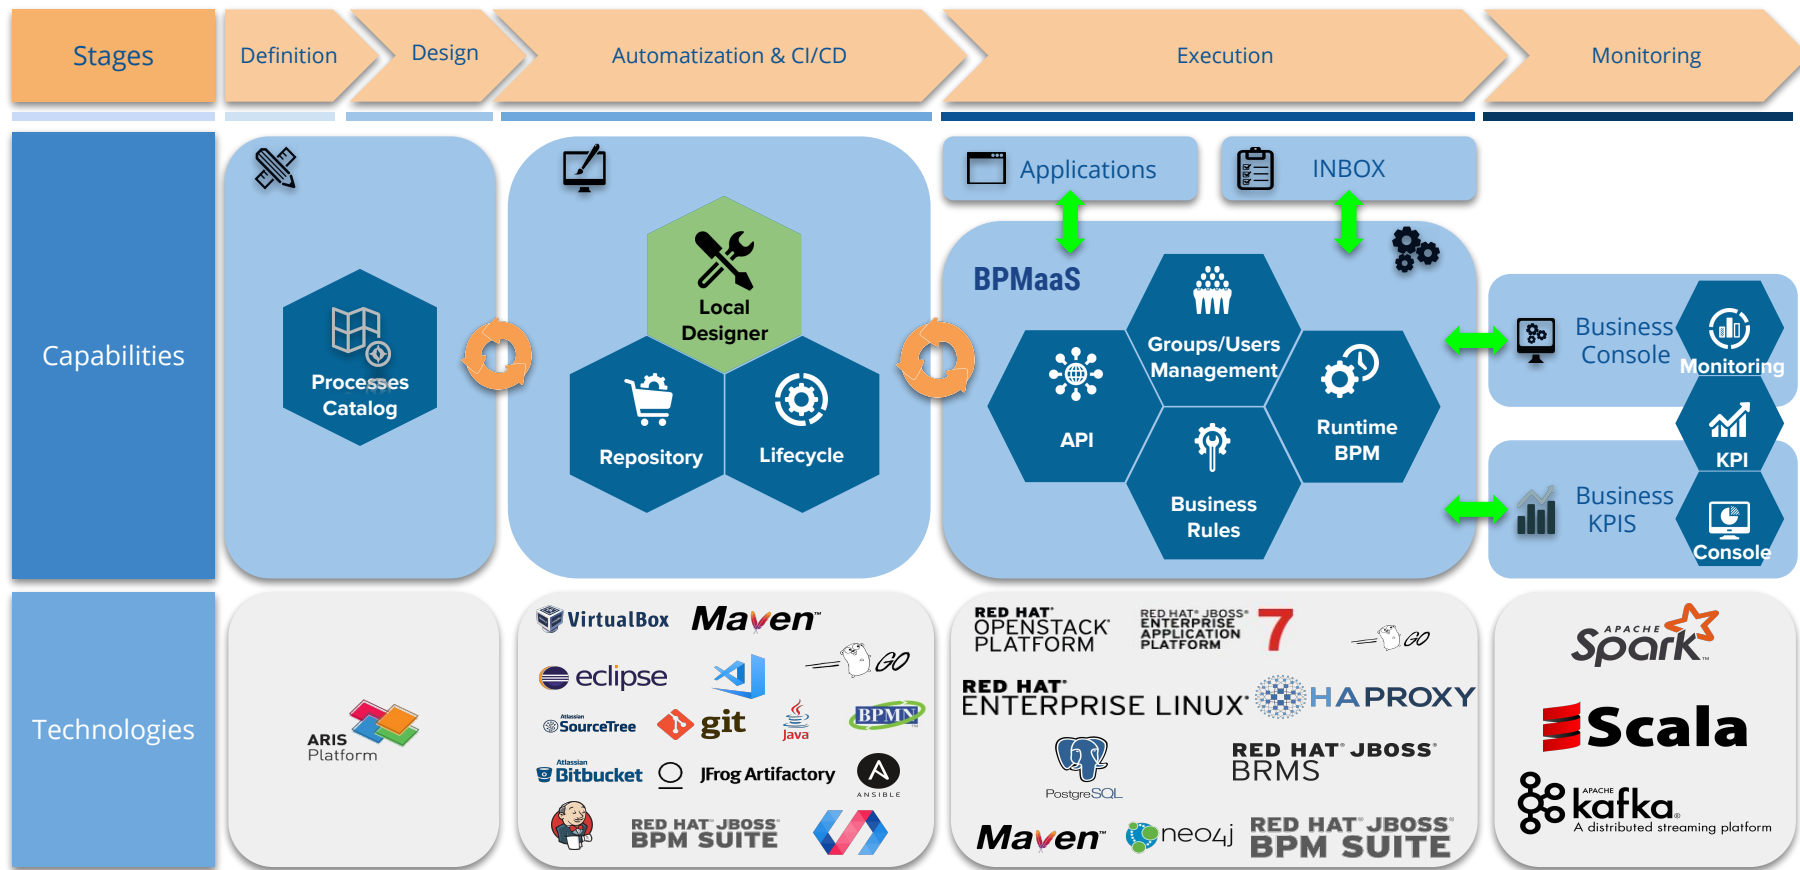

# Gaps “Bite”: API processes and tasks

		GAP	Open	Assigned to	BBVA Requir	Analysis	Design	BBVA Valid	Impl	Status	Jira	Included version (Draft)
API	Advanced Queries	Add filter Potential Owner for Adv. Queries (Group Search)	21 Aug	Red Hat	100%	--	--	--	--	Done	BAPL-781	Alpha 03
		Business Data (Advanced Queries)	4 Sept	Red Hat	100%	--	--	--	--	Done	BAPL-835	Alpha 03
	Operations	Forward task to a list of potential owners	12 Sep	Red Hat	100%	100%	--	--	--	Done	BAPL-589	Alpha 03
	Model	Not Exists customTaskId Field	25 Sep	Red Hat	100%	--	100%	100%	--	Done. Waiting for BPMS release.	BAPL-801	Beta 01
	Error Messages	Enrich error messages from API REST	08/03	Red Hat	100%	--	--	--	--	Waiting for Red Hat solution	BAPL-911	7.1 GA

# How RH BPM looks like now and roadmap

## Red Hat BPM Suite v 6.x

- Includes Process Execution as a service

## Red Hat Process Automation Manager 7.0

- Case management
- Process and task administration
- Cloud
- Authoring and getting started experience

Authoring

Execution

Monitoring

## Controller

- Keeping track of server instances
- Server configuration
  - Capabilities (Rule, Process, Planning, etc.)
  - Deployed containers, for example
    - Project A - v1.0
    - Project A - v2.0
    - Project B - v1.1
- Update existing server configurations
  - Add containers
  - Remove containers

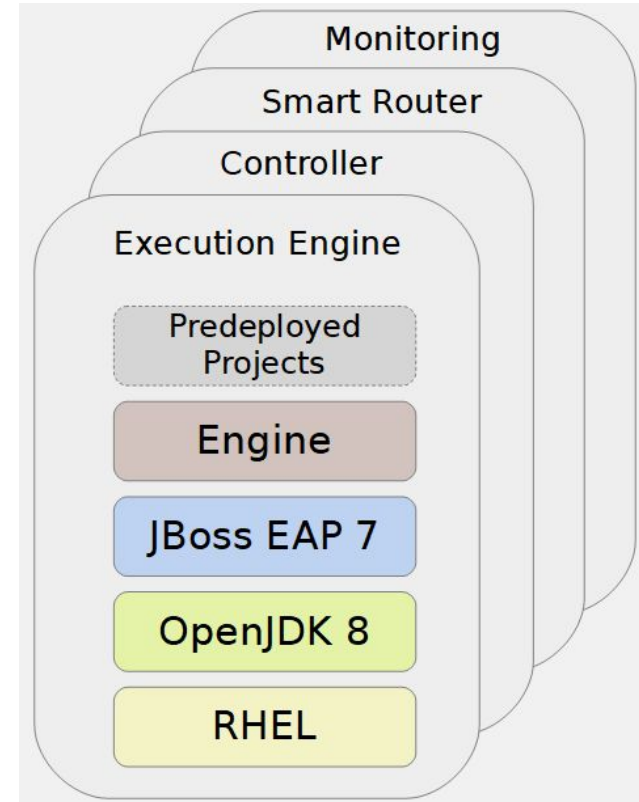

## Smart Router

- Acts a server instance
- Delegate requests to the right server instance
  - Across different server configurations
  - Based on minimal information
- Aggregate data
  - From different server instances

# Cloud images

## *The Open-Source Way*

- Layered
- Configurable
  - Out-of-the-box configuration
  - Security + SSO
  - JMS, timers, etc.
- Customizable

# Process automation platform - RoadMap

**RHPAM v7**

# Lessons learnt and future goals

**Our objective is to build a platform to enable truly digital process automation...**

**1**

Communication for Use Cases common understanding: Workshops all together

**2**

There is always area for improvement: new gaps and how to deal with it

**3**

Designer and Process Modeling requirements first, runtime after that: Process Lifecycle

**4**

**Engage end user/customer since the beginning**

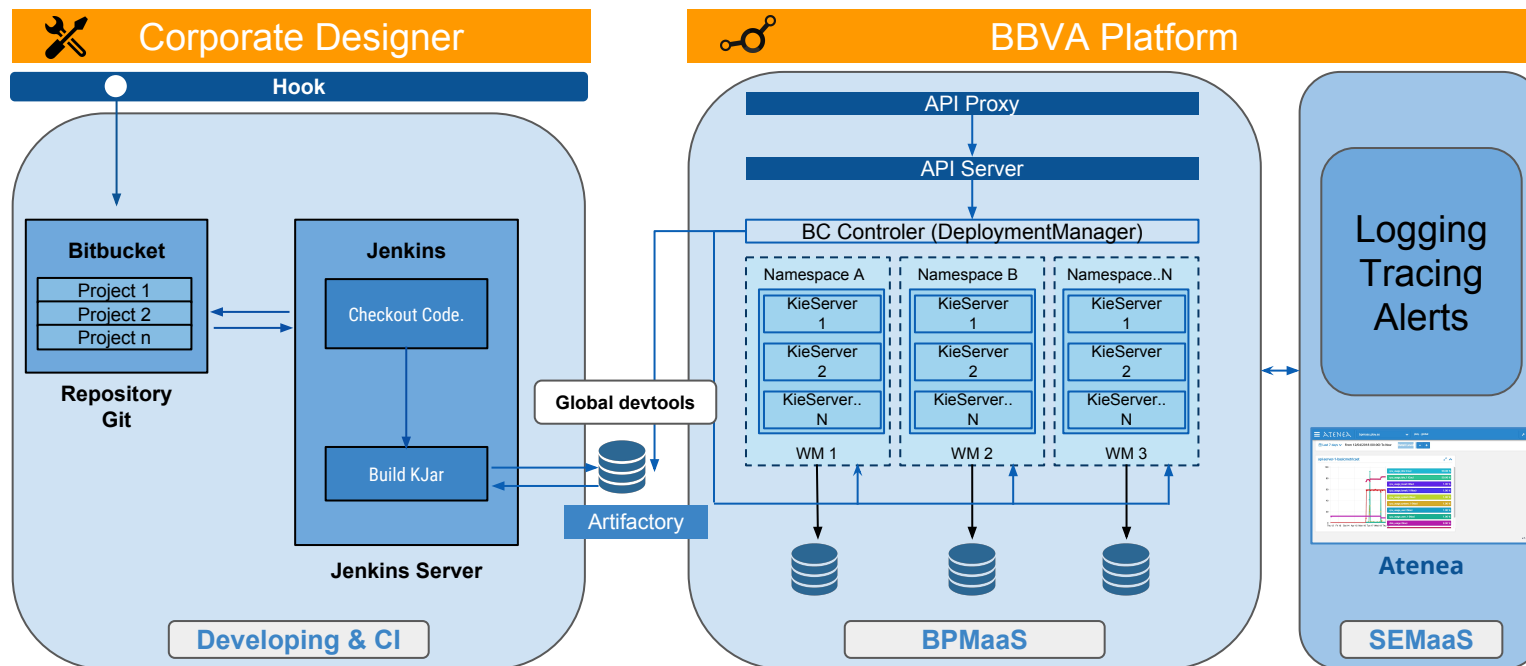

**FUTURE**

**Improve/Industrialize processes migration from other tools and platforms**

**BPM Platform as source of lots of event types to be processed in the Analytic platform.**

# Advanced Process Automation Capabilities

## BBVA Platform Overview

**SEMaaS** provides tools to trace (Rho) and log (Omega) code executed in BPM runtime

**Atenea** console shows all the information related to log traces ,service executions and delays and Alerts
