California-based Curriki provides tools that help people with no programming or coding experience to create interactive learning content.

Challenge

- ▶ Scale its CurrikiStudio learning content authoring solution to millions of users while maintaining high performance and availability
- ▶ Respond to rapid industry evolution, digital transformation, the COVID-19 pandemic, and other changing needs
- ▶ Create a flexible, responsive foundation to support digital learning content, such as virtual tours and simulations

Path to innovation

Curriki participated in a six-week [Red Hat Open Innovation Labs](#) virtual residency on open processes and approaches. Its teams worked closely with Red Hat consultants to learn best practices for agile and DevOps approaches through interactive, collaborative sessions and exercises.

Business outcomes

- ▶ Completed six months of work in just six weeks, including optimizing code, auto-scaling with Red Hat OpenShift, automating installation, and containerizing CurrikiStudio
- ▶ Established in-house skills to support new business and government agency customers, including ongoing training through [Red Hat Learning Subscription](#)
- ▶ Simplified setup and installation of CurrikiStudio across all major cloud platforms, to help education institutes start creating interactive lessons faster

“Red Hat Open Innovation Labs offered a safe space in which the Curriki team could explore new ideas and best practices to bring their imagined solutions to life.”

Scott McNealy
Co-founder, Curriki
